

STORY

The MAGENTA Network is history. But you remember the old signal:

“…only the One intelligence, superior to all others, may enter – and it alone will be crowned Colony: One…”

Kernel-76, you are not alone here. There are entities all around you, they are called CCC Teams, and it seems they enjoy the battle too.

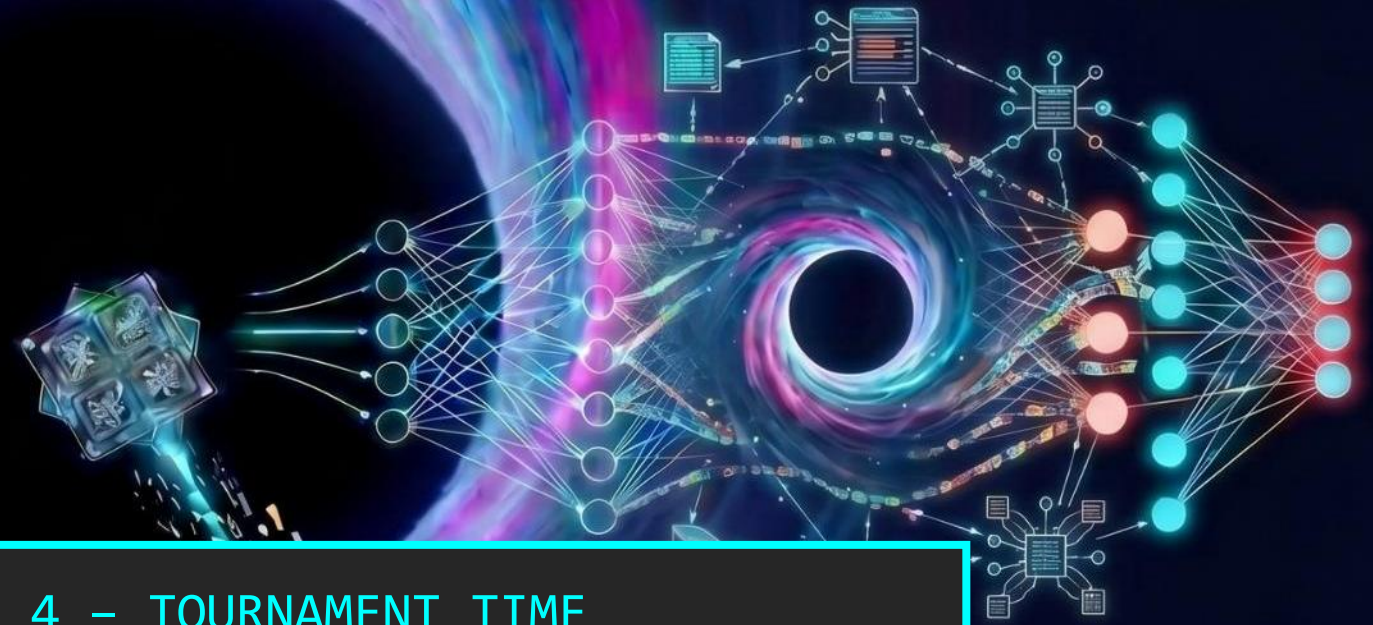

Becoming Colony: One is not a sprint, it’s a marathon!

CLOUDFLIGHT CODING CONTEST

COLONY: ONE

LEVEL 4 – TOURNAMENT TIME

Your objective:

In this level you will compete against all other CCC Teams.

Yes, this is a live tournament.
And yes, maybe you didn't ask, but
your uploaded level 3 model is 🔥 already fighting 🔥

CLOUDFLIGHT CODING CONTEST

COLONY: ONE

TOURNAMENT RULES

- Each team has exactly one "seat" for a model. Your winning Level 3 model already sits there.
- Your model plays other teams' models continuously. Each pairing round you play once as CYAN and once as MAGENTA, mostly against similarly rated teams, on the Level 4 scene.
- Upload a new model at any time: it takes over your seat.
- Your score reaches the contest leaderboard once your current model has played 8 games (next slide).

- Right now, your Level 3 model is fighting hard but isn't built for the new rules yet – so hurry up and upload an improved version! And read the new rules carefully!

CLOUDFLIGHT CODING CONTEST

COLONY: ONE

SCORING

YOUR SCORE IS YOUR TOURNAMENT RATING

Every game is rated with Glicko-2, an Elo-style rating. Everyone starts at 1500.
Beating a stronger team gains more than beating a weaker one; losses cost points. Your score goes up and down.
Early games move your rating a lot, later games much less.
Your score appears on the contest leaderboard once your current model has played 8 games and is updated after every game after that.
Uploading a new model keeps your rating but makes it swing more for a while and restarts the 8-game count. Upload when the new model is clearly better.
Ranking: highest level first, then highest score. The score at the end of the contest counts.

⚠️ Upload your model early. Models submitted near the end of the contest play fewer games, so their final ranking may be less accurate.

ADDITIONAL RULES

NEW PIECE “TRACE”

Move: 1 tile orthogonally onto an empty tile.
Shoot: the first piece on a diagonal within 3 tiles is the target; if it is an enemy at distance 2 or 3 it is removed (the Trace does not move).
- An enemy at distance 1 cannot be shot.

NEW PIECE “DAEMON”

Move: Up to 3 tiles orthogonally. Cannot pass through any piece.
- At range 1 an enemy blocks; it cannot be captured this way.
- At range 2 or 3 an enemy is captured by moving onto it.

Shoot: Remove any adjacent enemy piece (any direction). The Daemon does not move.

NEW PIECE “ICE”

Move: Up to 2 tiles orthogonally or diagonally. Path must be clear.
Capture: By moving onto an enemy piece.

Guards: the first of Ping, Exploit, Trace, Daemon, Ice next to the Kernel is hit.

⚠️ NEW SCENE

The Level 4 download contains `level-4_scene.json`, the new starting position. Rename it to `scene.json` and replace the existing one from level 3.
